The iPad: what began as one beautiful tablet has evolved into five tablet lines, each of which has its own strengths and targets its own section of the portable market. Apple's iPad range has been the epitome of how tablets should look, feel, and perform. And it seems that each year, they're only getting better – there's a good reason why these slates dominate our list of the best tablets.For 2020 there was two new contenders in the mid-range sphere of Apple tablets: the simply-named iPad (2020), which kept the old design but added an updated chip; and the iPad Air (2020), which has a bigger display than its predecessor, boasts Apple's more advanced processor (not the M1 chip of the 2022 Air though), and comes with a host of advanced features.The iPad Air (2020) does seem to be the more powerful and feature-rich of the two, making it the better choice for most people. However, it also comes with a much higher price tag, so its really about whether those extra features are worth the extra cost for you. So, in the iPad (2020) vs iPad Air (2020) battle, there isn't just one straightforward winner. We'll go through everything you need to know, and you'll also find the current lowest prices for these, but you can also check out our round-ups of the best iPad deals, the best iPad Pro deals and the best iPad mini deals for all the latest offers.iPad (2020) vs iPad Air (2020): PriceTo budget-conscious tablet users looking to upgrade their old one or get into the iPadOS ecosystem, the iPad (2020) is certainly the more appealing option. That's because it is the cheaper proposition, starting at £329/\$329/AU\$499 for the Wi-Fi only version and at £459/\$459/AU\$699 for the cellular one.Those who have a bigger or more flexible budget, on the other hand, might find the iPad Air (2020) a better value. It starts at £579/\$599/AU\$899 for the Wi-Fi model and at £709/\$729/AU\$1,099 for the cellular one, and comes with a plethora of features that the iPad doesn't.That's a pretty major difference. Of course, there's also a big difference in specs here, with the Air rocking a chip that's said to offer 40% improvement in the CPU and a 30% boost in graphics, as well as double the storage, plus screen, design and other extras.However, if having a more powerful chip and more advanced features isn't vital to you, it's worth bearing in mind that the highest specced Wi-Fi only iPad (2020), which comes with 128GB storage, will only set you back £429/\$429/AU\$649. It's still a lot less than any iPad Air version.iPad (2020) vs iPad Air (2020): Design and features(Image credit: Apple)Of course, there is the matter of size as well. True to its name, the iPad Air (2020) is slightly thinner and wider, though by a mere 0.05 inch in depth and 0.2 inch in width, as well as lighter by 32 grams.Will that small difference matter in the grand scheme of things? Probably not for most people, but it's when you factor in the display that you really see a difference. Despite the iPad (2020)'s slightly bigger size, it has a smaller display of 10.2 inches. That's because of those thick bezels that Apple is sticking with for the line.Considering that most monitors and displays are going for thinner bezels these days, it seems like a weird choice, especially as it's entirely possible to trim those bezels down considerably. The iPad Air (2020), for instance, has much thinner bezels, giving it a 10.9-inch display. It isn't only the size of the display that is different here. Both boast a LED-backlit screen with multi-touch and IPS technology with 500 nits of brightness and a fingerprint-resistant oleophobic coating. However, the iPad Air's liquid retina display has a 2360 x 1640 resolution (over the iPad's 2388 x 1668) and comes fully laminated (meaning the screen is closer to the surface) with anti reflective coating, P3 wide color support, and True Tone technology (Image credit: Apple)The iPad Air (2020) also has five color choices – silver, space gray, rose gold, green, and sky blue – while the iPad (2020) only comes in the first two as well as gold, depriving its would-be owners of the more fun alternatives. (Image credit: Apple)In terms of accessories, the former has more options over the latter as well. Whereas the iPad is only compatible with the Apple Pencil (1st generation) and the Smart Keyboard, the Air is compatible with the Apple Pencil (2nd generation), Smart Keyboard, and the legendary Magic Keyboard.The Air has improved camera features, naturally. In the back, the iPad (2020) comes only with an 8MP wide camera that has an f/2.4 aperture and is capable of taking panorama photos of up to 43MP. Meanwhile, the iPad Air (2020) has a 12MP rear camera with a bigger aperture of f/1.8, stabilization for Life Photos, wide color capture, Focus Pixels for its autofocus, and Smart HDR. It's also capable of taking panoramas of up to 63MP.Whereas this rear camera on the iPad only takes 1080p HD videos at 30 fps and 720p slow motion videos at 120 fps, that of the Air's shoots 4K videos at 24 fps, 30 fps and 60 fps as well as 1080p slow motion videos at 120 fps or 240 fps.The front cameras are also vastly different. The iPad has a 1.2MP FaceTime HD camera with 720p HD video recording while the Air has a 7MP FaceTime HD camera with P3 wide color capture, Smart HDR, and 1080p HD video recording capability.iPad (2020) vs iPad Air (2020): Specs and performance(Image credit: Apple)When it comes to iPad (2020) vs iPad Air (2020), there's really no doubt as to which one dominates in performance. Both tablets do come in Wi-Fi and cellular models, but while the iPad has opted to upgrade to the A12 Bionic chip from its predecessor's A10 Fusion chip, the Air already has A14 under the hood.(Image credit: Apple)According to Apple, this A14 chip, built on the new 5 nanometer process, has 16 cores and brings in 40% CPU improvements and a 30% boost in graphics over the A12. That's not to mention that it also comes with a much improved AI performance. In other words, the iPad Air should be faster and much more intuitive, though that might be less evident to folks who are less discerning when it comes to processing and graphical power.What would be more noticeable to most people is storage space. The iPad (2020) comes in 32GB and 128GB storage, but the iPad Air (2020)'s configurations are more generous with double the storage, either 64GB or 256GB. The fact the Air also comes equipped with Wi-Fi 6 and Bluetooth 5.0 is certainly an upgrade from the iPad's. Sadly, that more advanced chip doesn't give the Air that much of an advantage over the iPad in terms of battery life. Both tablets offer up to 10 hours on Wi-Fi and up to 9 hours via cellular on a single charge.iPad (2020) vs iPad Air (2020): Verdict (Image credit: Apple)Looking at both its features and its specs, it's obvious which tablet has an advantage here. In the battle between iPad (2020) vs iPad Air (2020), it's the latter that is the clear winner. Its features – namely, the display, cameras and video capabilities, and compatibility with accessories – give it quite a lead while its innards give it more power, speed, and storage.However, all that comes with a loftier price tag. The iPad Air (2020) may feel like a luxury to a lot of people, and when you consider that at least £250/\$270 difference, it feels a bit extravagant indeed (though obviously not as much as the newer 2022 iPad Air with M1 processor).So, if you're deciding between these two tablets, our recommendations are as follows: if you need (or want) the advanced features, lighter form factor, and more powerful specs, and you can afford to spend just a little more, by all means go for the iPad Air (2020). If, on the other hand, your budget is a bit tight, you really need to upgrade that ageing iPad you've got at home, and you don't need that much power, the iPad (2020) should be more than enough to meet your needs. The original iPad Air told us all we needed to know about Apple's changed approach to tablets – with a 43% thinner bezel and a 28% lighter body than the iPads that came before it, the Air champions the 'easier to live with' ideal.Although the iPad Air's successor, the iPad Air 2, and its successor, the iPad Air 3, have now been out for a while it doesn't mean the original iPad Air isn't worth considering if you're after a tablet, especially since the price has dropped now that there's a newer Air on the block.The original iPad Air took many of its design cues from the iPad mini 2. It's got the same smooth back design, thinner bezel and more attractive speakers at the bottom of the slate for more of a family likeness with the cut-down tablet from Apple's stables.While the Air is a clear copy of that smaller device I'm not going to hold it against Apple, as the mini already had a stunning design, and the Air takes that design ethos and brings it to the big leagues. It's a design Apple stuck with for the iPad Air 2, for the most part, so it must be good. It also has machined buttons that don't feel loose if you shake the device, adding to the premium feel.On top of the improved design the Air also got Apple's A7 chip, bringing with it 64-bit processing power and heaps of battery-saving features to keep your tablet going even longer in day-to-day use. That's also been superseded, by the A8X chip in the Air 2 and the A9X in the iPad Pro, but you still get a decent slug of power here.And the greatest thing about the iPad range in my eyes is the price – Apple originally started the 16GB Wi-Fi-only model at the same cost as its rivals, and while that outlay does spiral up as capacity and connectivity increase, for an Apple device to not charge an (unnecessary) premium is something I'm really happy to see.Even better, since the arrival of the iPad Air 2 prices for the original iPad Air have fallen.You're looking at a price range of £319 - £459 (\$399 - \$579 or AU\$499 - AU\$709), going from the 16GB version (Wi-Fi only) to the 32GB cellular option.Apple has discontinued the 64GB version of the iPad Air, so if you're after a larger-capacity slate you'll want to invest in the iPad Air 2.You could also scour the internet for a second-hand iPad Air 64GB model. With the launch of the iPad Air 2 many people have put their perfectly good original iPad Airs up for sale, so with a bit of careful shopping you could net yourself a bargain.Apple has lobbied in a lot of useful free software, as well as bringing a more refined experience with iOS 8 and now iOS 9, and you can see that it's put a lot of effort into making the iPad Air a tablet that's still relevant in the market, even if it's now getting on a bit in tablet terms.On that latter point, if you're thinking about buying the iPad Air right now it would be remiss of us not to point out that the iPad Air 2 offers a number of enhancements over this model.What's more, the iPad Air 3 could be right around the corner if reports are to be believed, which would likely see the iPad Air dropped from the range altogether, with the iPad Air 2 slotting in as the entry-level 10-incher.It may not seem particularly future-proof from a certain perspective, then, but I'd wager that the iPad Air will remain a solid, and well-supported, runner throughout 2016 and beyond.The keynote for the launch of the iPad Air talked a lot about Apple's dominance in terms of tablet usage, but since then a large number of users are starting to warm to the idea of an Android model as their main device.Samsung is currently the big name in Android, with its Galaxy Tab S line offering an improved screen and better ergonomics for those preferring the Android experience in a tablet. Google's Nexus 9 is another to have impressed with its performance and UI.Want the best of Android in a tablet? Try our Samsung Galaxy Tab S review!It's worth noting that the 16GB option of the iPad Air is nigh-on useless as a purchase if you're thinking of pulling in all the free apps Apple is slinging your way; this was an issue when the Retina display landed on the iPad 3, and has only got worse as more HD apps from developers have been slipped onto the App Store.The fact that the original iPad Air now only comes in 16GB and 32GB configurations may make you reconsider your purchase if you're looking at storing a large number of photos, music, videos and apps.Even so, the iPad Air remains a tempting purchase on paper – but how does it perform in the hand when subjected to rigorous daily use?DesignThe iPad Air is an odd device when you pick it up for the first time. When you hear all the numbers being bandied about you'd understandably assume that you'd experience something that was almost ghost-like in the hand, a tablet that could almost get blown away.And I'm absolutely not disputing that – the iPad Air remains one of the most balanced tablets on the market even now, with great precision going into the engineering throughout.However, if you've touched an iPad mini (pick a number, any number), or just haven't held an older iPad for a while (and, going by the reaction of some people we tested with, even some that had) you won't feel as much of a difference as you might be expecting.It's only with the significantly slimmer iPad Air 2 that a tangible gap between the feel of the old and tablets was really established, even though it was the iPad Air that really carried the look of Apple's full-sized tablet range to the next level.The design of the iPad Air is, as I've mentioned, very impressive. Yes, it's totally based on the iPad mini, and the smooth aluminium back is really great to feel in the hand. It's a shame that most people feel the need to slap a cover on an iPad as soon as it's bought – while I get the notion of protection, it hides away some cracking design.That said, at least it keeps the fingers away from the chassis, and the iPad Air is a real magnet for prints. The back cover isn't too bad, but the mirrored Apple logo sucks down finger oil and is loathe to give it up, even after hard scrubbing with a cloth.It might not sound like a big deal, but it makes your premium tablet look a little unkempt right from the start.In actual operation, though, the design of the iPad Air complements the impressive innards superbly. It's unsurprisingly not possible to wrap your hand all the way around the edges of the Air, but then again it's sufficiently light (and comes with the ability to disregard stray thumbs encroaching on the screen, again like the iPad mini) to not make a big difference.The rest of the buttonry – the top-mounted power key and the silencing rocker switch and volume buttons at the side – haven't moved far, but protrude nicely to make them very easy to hit no matter where you're holding the device. Such user-friendliness is often sacrificed in the quest to make tablets look sleeker, so I'm happy Apple has gone the other way here.Having since switched to the iPad Air 2, I can also say that I miss the original Air's slider switch for either muting or locking the screen's orientation. Yes, you can achieve the same functions using Control Center, but there's nothing like a good dedicated button, is there?I do have one note of criticism in terms of design for such a premium (and still expensive for its age) piece of kit: the screen has a plastic thud to it when tapped, on account of the smaller and lighter innards.It's most noticeable when grazed with a fingernail – although with the addition of a case the effect is lessened – and I'm surprised Apple let this go. It may be that, in making the design thinner and removing part of the inner cage the overall strength of the chassis is somewhat reduced; but then the iPad Air 2 doesn't share the same problem, and it's significantly more svelte.It's not a major issue by any means, and certainly one that you'll only pick up on sporadically, but it's still enough to irk at times when you're expecting a truly premium experience.Many of you will also be wondering why there's no Touch ID onboard the iPad Air when it was such a big selling point for the iPhone 5S, which launched a month or so before it.We're in the same boat. The architecture is there. It surely can't be an issue of space, seeing as the technology fitted into the iPhone 5S.Turns out Apple held it back as one of the 'big upgrades' for the iPad Air 2, which certainly raised a few eyebrows. Still, in my experience with the iPad Air 2 I don't tend to use it much anyway – certainly nowhere near as much as I do on the iPhone 6S. It's not a massively galling omission on the iPad Air, then.TODAY'S BEST DEALS
